

Day 1: Final Project

Question for today:

How many kids do married people have in average in our dataset?

1. Open the attached Power BI .pbix file or use your own Power BI file (just make sure to use the same settings as we did in the course)
2. Clean the data so that you can answer the question above. Use the following tools / steps:
 - Connect the file to Power BI
 - Remove Top Rows
 - First row as a header
 - Changing column names
 - Removing invalid rows
 - Setting up the data types (replace values if necessary)

Hope you will enjoy the exercise! 😊

Cheers,

Nikolai
